

VTX Front LED Bracket Installation Instructions

Thank you for purchasing a front LED Bracket for your VTX. This bracket allows you to mount a set of 4.5" Radiantz LED strips to the bottom of the lower triple tree. Please follow these instructions to install the bracket:

Attaching the LED strips to the Bracket

Make sure the bracket is clean and oil-free. Remove the red tape cover and expose the adhesive on the back of the LED strips. With the LED wires oriented towards the center of the bracket, carefully attach the LED strips so that they are perfectly centered on the bracket pads.

Installing the Bracket on a VTX1800

1. Remove the two bolts that hold the front headlight bracket to the lower triple tree and replace with the two longer bolts that came with the LED bracket.
2. Underneath the triple tree, slide both a short spacer and a long spacer on each of the new bolts.
3. Thread the new bolts directly into the LED bracket, tighten evenly and slowly.

Installing the Bracket on a VTX1300

1. Remove the two bolts that hold the front headlight bracket to the lower triple tree and replace with the two shorter bolts that came with the LED bracket.
2. Underneath the triple tree, slide a long spacer on each of the new bolts.
3. Thread the new bolts directly into the LED bracket, tighten evenly and slowly.

Wiring up the LED's

The stock Honda turn signals utilize dual filament bulbs (running light and turn) however the Radiantz LED strips are single filament bulbs. If you want the LED strips to operate as both running lights and turn signals, you need to use a "Magic Adapter Cable" on each of the LED strips. This will allow the LED's to operate as running lights and then flash as turn signals. Because the LED strips consume very low power, you may also want to use a load equalizer to maintain a slow flash rate.

Happy riding, hope to see you on the road someday.
